What function or functions would you like to test?

I'd like to test my insert function.

I have tools for generating simple mathematical properties like idempotence, why not try that?

**Generate Idempotence Property**

That's great, but I actually wanted to check that this function behaves the same as insertion into a list. Is that possible?

Yes, try running Mica. It may require you to do some other setup.

**Start Mica Wizard**

After that test, your code coverage is 70%! That's great, but you may want to keep going.

I can provide a template for an LTLTL property if you want to check some properties of logged outputs, or I can look for other potential properties with QuickSpec.

**Generate LTLTL Template**

**Try Running QuickSpec**
